## Part I Technologies

<b>1 Non-radiative Wireless Power Transmission: Theory and Applications</b> .....	3
Giuseppina Monti, Mauro Mongiardo, Franco Mastri, Alessandra Costanzo, Laura Corchia and Luciano Tarricone	
1.1 Introduction .....	4
1.2 Two-port network representation of a WPT link .....	5
1.2.1 Statement of the problem .....	5
1.2.2 Impedance matrix modeling of a WPT link .....	6
1.2.3 Admittance matrix modeling of a WPT link .....	14
1.3 Application of theory: the case of two coupled inductances .....	19
1.3.1 Coupled inductances with a capacitive T network on the primary side .....	23
1.4 Application of theory: the case of a capacitive WPT link .....	25
References .....	29
<b>2 Wireless Power Transfer based on Metamaterials</b> .....	31
Bingnan Wang, William Yerazunis, and Koon Hoo Teo	
2.1 Introduction .....	32
2.2 Metamaterials for WPT .....	33
2.2.1 Metamaterials and Super-lens .....	34
2.2.2 Metamaterials and WPT .....	34
2.2.3 Experimental Realization .....	36
2.3 Array of Resonators for Mobile Power Transfer .....	41
2.3.1 Array of Coupled Resonators .....	41
2.3.2 Numerical Simulations and Circuit Analysis .....	42
2.3.3 Experiment Demonstration .....	47
2.4 Conclusion .....	50
References .....	51

<b>3</b>	<b>Optimal Array Beamforming for Microwave Power Transmission in Complex Environment</b> .....	53
	Ce Zhang, Bingnan Wang, Akira Ishimaru and Yasuo Kuga	
3.1	Microwave Power Transmission System .....	54
3.1.1	Problem Formulation .....	54
3.1.2	Transmission Efficiency based on Antenna Parameters ..	56
3.1.3	Transmission Efficiency based on Channel Transfer Function .....	58
3.1.4	Experiment Study of Indoor MPT .....	61
3.2	Reivew of Optimal Beamforming Techniques .....	64
3.2.1	Array Factor Optimization .....	64
3.2.2	Retrodirective Array/Phase Conjugate Array .....	65
3.2.3	Adaptive Array Digital Beamforming .....	65
3.3	Time Reversal Eigenmode Beamforming .....	66
3.3.1	Pseudo Transmission Efficiency .....	66
3.3.2	Transmission Efficiency Optimization .....	68
3.3.3	Time Reversal Eigenmode Beamforming .....	69
3.4	Numerical Examples .....	72
3.4.1	Arbitrary Array Beamforming in Free Space .....	73
3.4.2	Arbitrary Array Beam Steering .....	75
3.4.3	Arbitrary Array Beamforming in Multipath Environment .....	77
3.5	Conclusion .....	79
	References .....	80
<b>4</b>	<b>Far-Field Wireless Power Transfer for IoT Sensors</b> .....	83
	Hubregt J. Visser, Hans W. Pflug, and Shady Keyrouz	
4.1	Introduction .....	83
4.1.1	Near-Contact WPT .....	85
4.1.2	Far-Field WPT .....	85
4.2	Far-Field WPT Basics .....	85
4.2.1	Power Density .....	86
4.2.2	Wireless Power Transfer .....	87
4.2.3	RF Harvesting from the Ambient .....	88
4.3	Rectifier .....	88
4.3.1	Equivalent Circuit Analysis .....	90
4.3.2	Harmonic Current Analysis .....	92
4.4	Cascaded Rectifiers .....	94
4.5	Receive Antenna .....	97
4.5.1	Antenna Input Impedance .....	97
4.5.2	Antenna Integration Level .....	97
4.5.3	Antenna Shielding .....	98
4.5.4	Miniaturized Complex Conjugately Matched Antenna ...	98
4.5.5	Miniature Shielded Antenna .....	100
4.6	Rectenna .....	101

4.6.1	Power Management . . . . .	101
4.6.2	Efficiency Evaluation . . . . .	102
4.6.3	Complete Rectenna . . . . .	105
4.7	Future Developments . . . . .	105
4.8	Conclusions . . . . .	108
	References . . . . .	109
<b>5</b>	<b>Wireless Power Transfer: Discrete Rectifier Modeling and Analysis . . . . .</b>	<b>111</b>
	Hans W. Pflug, Hubregt J. Visser	
5.1	Introduction . . . . .	111
5.2	Rectifier modeling . . . . .	112
5.2.1	I-V Relationship . . . . .	114
5.2.2	Macro model . . . . .	115
5.2.3	Integrated Equivalent . . . . .	119
5.2.4	SPICE model . . . . .	120
5.3	Circuit Analysis Techniques . . . . .	124
5.3.1	Software Tools . . . . .	125
5.3.2	Time Trajectory Technique . . . . .	126
5.3.3	Adaptive Input Power Algorithm . . . . .	126
5.3.4	Steady-state algorithm . . . . .	128
5.4	Comparing Topologies . . . . .	129
5.4.1	Definition of Efficiency . . . . .	133
	References . . . . .	134
<b>6</b>	<b>Unconventional Waveform Design for Wireless Power Transfer . . . . .</b>	<b>137</b>
	Alirio Boaventura, Nuno Borges Carvalho and Apostolos Georgiadis

## Part II Communication

<b>8</b>	<b>Trade-offs in Wireless Powered Communications . . . . .</b>	<b>185</b>
	Panagiotis D. Diamantoulakis and George K. Karagiannidis	
8.1	Introduction . . . . .	185
	8.1.1 Motivation . . . . .	186
	8.1.2 Contribution . . . . .	187
8.2	System model . . . . .	188
	8.2.1 Phase 1 . . . . .	188
	8.2.2 Phase 2 . . . . .	189
8.3	Trade-off between Information Transmission and Energy Transfer . . . . .	189
	8.3.1 Single Timeslot Approach . . . . .	190
	8.3.2 Multiple Timeslots Approach . . . . .	193
8.4	Trade-off Between Decoding Complexity and Performance . . . . .	196
	8.4.1 TDMA Protocol . . . . .	196
	8.4.2 NOMA Protocol . . . . .	197
	8.4.3 Comparison between TDMA and NOMA in Terms of Fairness . . . . .	199
8.5	Trade-off between Fairness and Performance . . . . .	200

8.5.1	Weighted Sum-Throughput	201
8.5.2	Rate-Profile Method	201
8.5.3	Common Throughput Maximization	203
8.5.4	Comparison of Fairness Aware Schemes	204
8.6	Trade-off between Energy-Efficiency and Throughput	204
8.6.1	Negligible Processing Cost	204
8.6.2	Non-Negligible Processing Cost	205
8.7	Conclusions	207
	References	207
<b>9</b>	<b>Simultaneous WPT and Wireless Communication with TDD Algorithm at Same Frequency Band</b>	<b>211</b>
	Naoki Shinohara	
9.1	Introduction	211
9.2	Time Division Duplex WPT (TDD-WPT)	215
9.2.1	TDD-WPT assisted ZigBee	215
9.2.2	Microwave Power Receiver (Rectenna)	217
9.3	Coexistence of MPT and ZigBee uncontrolled-	220
9.3.1	Measurement Setup	220
9.3.2	Measurement Results of CW Microwave Irradiation	221
9.3.3	Measurement Results of Uncontrolled Intermittent Microwave Irradiation	221
9.4	Coexistence of MPT and ZigBee-scheduled and single-end device	222
9.5	Coexistence of MPT and ZigBee-scheduled and multi-end devices	227
9.6	Conclusion	228

<b>10</b>	<b>Asymptotically Optimal Power Allocation for Wireless Powered Communication Network with Non-Orthogonal Multiple-Access</b>	<b>231</b>
	Nikola Zlatanov, Zoran Hadzi-Velkov and Derrick Wing Kwan Ng	
10.1	Introduction	231
10.2	The Point-to-Point WPT System	233
10.2.1	Point-to-Point WPT System Model	234
10.2.2	Maximization of the Average Data Rate	236
10.3	Wireless Powered Communication Networks with Non-Orthogonal Multiple-Access	241
10.3.1	System Model	242
10.3.2	Maximization of the Average Data Rate	243
10.4	Numerical Examples	248
10.5	Conclusion	249
	References	250
<b>11</b>	<b>Energy-Efficient Cooperative Transmission for SWIPT in Wireless Sensor Networks</b>	<b>251</b>
	Songtao Guo, Yuanyuan Yang and Hongyan Yu	
11.1	Introduction	251

11.2	System and Communication Models	254
11.2.1	System Model	254
11.2.2	Communication Model	256
11.3	Problem Formulation	259
11.3.1	Network Energy Efficiency	259
11.3.2	Optimization Formulation	260
11.3.3	Transformation of Objection Function	262
11.3.4	Iterative Algorithm for Energy Efficiency Maximization	262
11.4	Distributed Algorithm for eCotrans Problem	266
11.4.1	Dual Problem Formulation	267
11.4.2	Power Allocation Subalgorithm	268
11.4.3	Power Splitting Subalgorithm	268
11.4.4	Relay Selection Subalgorithm	269
11.4.5	Lagrange Multiplier Update	270
11.5	Simulation and Discussions	271
11.5.1	Convergence and Performance Analysis	272
11.5.2	Impact of Relay Nodes on Energy Efficiency	272
11.5.3	Impact of Power Allowance on Average Harvested Energy	273
11.5.4	Impact of Inter-Cluster Distance on Energy Efficiency	274
11.5.5	Comparison on Energy Efficiency and Remaining Energy	275
11.6	Conclusions	276
	References	277

### Part III Mobility

<b>12</b>	<b>Using Mobile Nodes in Wireless Sensor Networks with Wireless Power Transfer</b>	<b>281</b>
	Xiaobing Wu	
12.1	Introduction	281
12.2	Centralized Approach	282
12.2.1	Planning of Mobile Charger	283
12.2.2	Joint Mobile Charging and Data Gathering	285
12.2.3	Using Minimum Mobile Chargers	288
12.2.4	Collaborative Mobile Charging	290
12.2.5	Localization with Mobile Chargers	291
12.2.6	Stochastic Event Capture with Mobile Chargers	292
12.2.7	Energy Provision for Mobile Nodes	294
12.3	Distributed Approach	296
12.3.1	On-demand Mobile Charger Scheduling	296
12.3.2	Planning for Single Mobile Charger	297
12.3.3	Coordinating Multiple Mobile Chargers	298
12.4	Conclusion	299
	References	299

<b>13 Strategies for Wireless Recharging in Mobile Ad-Hoc Networks . . . .</b>	<b>301</b>
Constantinos Marios Angelopoulos, Julia Buwaya, Orestis Evangelatos and José Rolim	
13.1 Introduction . . . . .	302
13.2 Related Work and Comparison . . . . .	304
13.3 The Model . . . . .	305
13.3.1 Mobility Models . . . . .	305
13.3.2 Energy Model . . . . .	306
13.3.3 Charging Model . . . . .	306
13.4 The Charger Traversal Decision Problem . . . . .	308

22.5	Energy transfer with loss	592

22.5.1	The protocol Small-Weighted-Transfer $\mathcal{P}_{\text{SWT}}$ ..	594
22.5.2	The protocol Online-Weighted-Average $\mathcal{P}_{\text{OWA}}$ ..	594
22.6	Performance evaluation .....	596
22.6.1	The impact of $\beta$ .....	597
22.6.2	Energy loss .....	601
22.6.3	Weighted energy balance .....	601
22.6.4	Convergence time .....	601
22.6.5	Overall efficiency .....	602
22.7	Conclusion .....	602
	References .....	602

## Part V Joint Operations

<b>23</b>	<b>Charging and Routing Activity Scheduling to Prolong Sensor Network Lifetime</b> .....	607
	Yang Peng, Wensheng Zhang and Daji Qiao	
23.1	Introduction .....	608
23.1.1	Organization .....	608
23.2	A Wireless Chargeable Sensor Network System .....	609
23.3	Wireless Charging Scheduling Scheme .....	610
23.3.1	Formulation of the Charging Activity Scheduling Problem	611
23.3.2	NP-Completeness of the Charging Activity Scheduling Problem .....	612
23.3.3	Heuristic Charging Activity Scheduling Algorithms .....	613
23.3.4	Experiments .....	616
23.3.5	Simulations .....	620
23.3.6	Summary .....	624
23.4	Joint Routing and Wireless Charging Scheduling Scheme .....	624
23.4.1	Overview .....	625
23.4.2	Routing Activity Scheduling .....	625
23.4.3	Charging Activity Scheduling .....	628
23.4.4	Performance Upper Bound of J-RoC .....	632
23.4.5	Experiments .....	633
23.4.6	Simulations .....	635
23.5	Conclusions .....	639
	References .....	640
<b>24</b>	<b>Joint Design of Solar Energy Harvesting with Wireless Charging</b> ...	643
	Cong Wang, Ji Li, Fan Ye and Yuanyuan Yang	
24.1	Introduction .....	644
24.2	Related Works .....	645
24.3	First Level: Placement of Solar-powered Sensors .....	646
24.3.1	Placement of SNs in Continuous Space .....	647
24.4	Second Level: Wireless-powered Sensors .....	648
24.4.1	Energy Balance .....	650
24.4.2	Energy Balance Curves .....	651

24.4.3	Adaptive Re-selection of Cluster Heads	651
24.5	Third Level: Mobile Chargers	654
24.5.1	Exhaustive Search	655
24.5.2	Minimizing Sum of Squared Distance	657
24.6	Performance Evaluation	661
24.6.1	Nonfunctional Nodes	661
24.6.2	Energy Efficiency	661
24.6.3	Harvested Solar Energy	663
24.7	Conclusion	664
